

KENNEDY THE TRUTH AT LAST?

THIS X-ray picture on the left clearly shows the front of the skull destroyed as the Warren Commission claimed.

But it does not agree with our photographs below which show the face undamaged with the bullet entry point arrowed on the right temple.

RIDDLE OF THE X-RAYS

ONE of these pictures has to be a lie ...

If the X-ray is that of Kennedy's shattered skull then the dead man in the other picture - published in Britain for the first time - is NOT the President.

But if the X-ray - produced by the Warren Commission - is not Kennedy's skull then the United States government has taken part in a huge deception.

Wound

That is the stunning conclusion of forensic expert Professor Anthony Busuttil, of Edinburgh University.

We showed him the picture - obtained from a secret file - of President Kennedy lying on a mortuary examination table only hours after he died.

**By ANGUS MACLEOD
and RON LAYTNER**

The bullet entry wound can be seen on his temple. His face is totally intact.

The picture was also shown to Professor Busuttil's colleague Dr. Gyan Fernando, who had just returned from a month-long trip to San Antonio, Texas.

He had been studying gunshot wounds with the help of the local police homicide team.

At first Professor Busuttil was cautious, saying: "The X-ray picture and the side-on picture of the wound are very difficult to match."

But after consulting Dr Fernando he was in no doubt.

"The X-ray simply does not fit the other picture."

"ONE OF THEM IS NOT KENNEDY."

He added: "In the X-ray picture there is quite a bit of bone missing around the eye, nose and cheek."

"But in the side-on picture there is no match."

"If someone had his face smashed in the fashion of the X-ray, it is highly likely the same contours would be in the actual photograph of the victim's head."

"In the shot showing the President with the throat wound on the mortuary slab there is no damage to the face exterior."

"There is no sign of bleeding"

Damage to the rear of the skull is evident where the bullet exited
